

BioPure fluid path components,
connect with confidence

About BioPure

BioPure has pioneered the design, development and delivery of innovative bioprocessing fluid path components since 1998.

Our strong market focus, aligned with a global presence, ensures BioPure will continue to be the market leader in single-use technology for many years.

As part of the Watson-Marlow Fluid Technology Group (WMFTG), we have combined market expertise in all aspects of fluid transfer; from pumps and tubing, to valves, reinforced hoses and final fill finish. Always on the leading edge of meeting regulatory expectations, we are confident that no other company can handle high purity biopharmaceutical fluid application better than WMFTG.

Product validation and traceability

BioPure aims to simplify your production operations, lower cGMP manufacturing costs and reduce process validation.

- » LOT traceability on every component
- » ISO 14644-1 Class 7 cleanroom manufacturing and packing
- » Materials are animal derived component free

Biopharmaceutical applications are amongst the most critical in the world. You need a partner who you can trust, who understands the process and is able to help achieve compliance and repeatability throughout.

BioPure fluid path components allow you to connect with confidence

- » **Q-Clamp**
Single-handed and tool free sanitary Tri-Clamp
- » **BioPure gaskets**
Unparalleled sealing performances
- » **High pressure hose**
Platinum-cured silicone braided hose
- » **BioClamp**
Plastic Tri-Clamp
- » **BioBarb**
Hose barb to Tri-Clamp adaptors
- » **BioValve**
Variable flow control valve
- » **Bio Y**
Equal barbed Y connectors
- » **BioEndCap**
End caps with pull tab for connectors
- » **FlatBioEndCap**
End caps for connectors

Process security; Quick and qualified

Patented sanitary tri-clamp with tamper evident option, qualified for bioprocess.

- » Compatible with a wide range of connector geometries
- » Ratchet position identification can aid junction validation
- » Can be fitted with unique Q-Clamp tamper evident identification technology
- » Sleek, lightweight design to maximize operator comfort and eliminate any potential of damage to bags or gloves

Q-Clamp™ is supported by an industry leading validation package for non-wetted components and meets current industry requirements including ISO 10993: Parts 5, 6, 10, and 11, USP <88> & USP <87>. Q-Clamp has also been evaluated for extractables using a single solvent approach.

Q-Clamp introduces the first true tamper evident security solution for Tri-Clamp® connections. The additional component can also be used for identification through colour, allowing procedures to specify relevant areas of the process:

- » Can be applied pre or post clamp assembly
- » Tool free application and removal
- » Available in eight colours; blue, grey, orange, purple, green, red, yellow and clear

BioPure high purity gaskets

Our sanitary gaskets support leak resistant connectivity within pharmaceutical and biotechnology production processes, reducing validation risks in contamination-free applications.

Each of our high-purity gaskets have been engineered to deliver unparalleled sealing performances under clamping compression. Each product has been manufactured from carefully considered materials to provide durable and robust sealing between mating surfaces, without compromising the integrity of your fluid path.

- » Our sanitary gaskets are all compliant with FDA regulations CFR 21 177.2600
- » Dedicated validation and qualification data to help you achieve GMP requirements
- » USP Class VI compliant and animal derived component free (ADCF)
- » Reduced validation risks for contamination free applications
- » Designed to achieve a smooth bore

High purity platinum-cured silicone gaskets

5000 series

Manufactured and packed within an ISO 14644-1 Class 7 cleanroom, these high purity silicone gaskets are ideally suited for bioprocessing fluid paths. Demonstrating comprehensive knowledge of the materials involved in packaging components, the 5000 series gaskets have a low extractable profile. They are also gamma stable for irradiation up to 50kGY, and autoclavable.

Product validation performed on post gamma-irradiated gaskets.

Extractable studies have been performed using a multi-solvent approach to BPOG guidelines.

- » Laser etched lot numbering for full material traceability (non-laser etched version also available)
- » Designed in accordance with ASME-BPE standards
- » USP Class VI compliant and animal derived component free (ADCF)
- » Compliant with FDA regulations CFR 21 177.2600
- » Gamma stable and autoclavable
- » Low extractable profile
- » Double-bagged and heat-sealed

RXPX series

The RXPX series sanitary silicone gaskets are platinum-cured and suitable for biomanufacturing processes. They are designed to achieve a smooth bore, contamination free fluid path under clamping compression.

- » Designed in accordance with ASME-BPE standards
- » USP Class VI compliant and animal derived component free (ADCF)
- » Compliant with FDA regulations CFR 21 177 2600
- » Lot numbering enables product traceability
- » ISO 14644-1 Class 7 clean room produced and packed
- » Single polyethylene (PE) bag

EPDM gaskets (ethylene propylene diene monomer)

EPDM gaskets offer quality performances in sanitary applications with repetitive steam-in-place (SIP) cycles. These sanitary gaskets have been designed to achieve a smooth bore, contamination free fluid path under clamping compression, retaining their geometric stability after repeat SIP cycles. This ensures that your SIP validation is not compromised.

Additionally, EPDM gaskets do not deform to trap bacteria, or stick, causing the gasket to adhere to ferrule face. The EPDM material maintains the important conditions of clean, intact removal with no trace of elastomer material finding its way into the fluid process.

- » Designed in accordance with ASME-BPE standards
- » USP Class VI compliant and animal derived component free (ADCF)
- » Compliant with FDA regulations CFR 21 177.2600
- » Lot numbering enables product traceability
- » Superior steam-in-place (SIP) stability with consequent clean ferrule and gasket separation

PTFE gaskets (polytetrafluoroethylene)

PTFE gaskets offer the ultimate chemical resistance and purity. PTFE is almost totally chemically inert, and offers versatility in application due to being highly flexible, strong, and able perform in extreme temperature conditions.

These high performance sanitary gaskets have been designed to achieve a smooth bore, contamination free fluid path under clamping compression.

- » Designed in accordance with ASME-BPE standards
- » USP Class VI compliant and animal derived component free (ADCF)
- » Compliant with FDA regulations CFR 21 177.2600
- » Lot numbering enables product traceability
- » Performs in extreme temperature conditions. Ranging from -350F to 450F (-212C to 232C)

PolySteel gaskets (polytetrafluoroethylene / stainless steel)

These high purity gaskets offer a quality performance in applications that require continuous steam resistance. A 50/50 PTFE/stainless steel composite, designed to dramatically reduce cold flow and creep, Polysteel gaskets maintain their integrity under repeated SIP cycles. They have been constructed for maximum sealability, providing leak proof performance, offering less downtime in plants.

Polysteel gaskets perform in extreme temperature conditions, ranging from -350F to 620F (-212C to 327C) and come in a range of sizes from ¼ inch to 6 inch.

- » Designed in accordance with ASME-BPE standards
- » USP Class VI compliant and animal derived component free (ADCF)
- » Compliant with FDA regulations CFR 21 177.2600
- » Lot numbering enables product traceability
- » PTFE/stainless steel composite for best in class continuous steam resistance
- » Performs in extreme temperature conditions. Ranging from -350F to 620F (from -212C to 327C)

Viton® gaskets (synthetic rubber and fluoropolymer elastomer)

Viton® gaskets deliver an enhanced performance in applications that require heat, acid and chemical resistance. Viton® has a high rubber density, which helps to maintain geometric stability after repeated SIP cycles.

These sanitary gaskets can be exposed to temperature extremes, ranging from -10F to 400F (-23C to 204C) and are available both flanged and unflanged in a range of sizes from ½ inch to 6 inches (unflanged) and 1 inch to 6 inches (flanged).

- » Designed in accordance with ASME-BPE standards
- » USP Class VI compliant and animal derived component free (ADCF)
- » Compliant with FDA regulations CFR 21 177.2600
- » Lot numbering enables product traceability
- » Improved heat, acid and chemical resistance
- » Available in flanged and unflanged options in a range of sizes

Envelope gaskets

Envelope gaskets are made from PTFE and are built around the choice of an EPDM or Viton rubber core, improving the gaskets sealing characteristics. They are designed to achieve a smooth bore, contamination free fluid path under clamping compression.

These sanitary gaskets can be exposed to temperature extremes from -350F to 450F (-212C to 232C) and come in a range of sizes from ½ inch to 6 inches.

- » Designed in accordance with ASME-BPE standards
- » USP Class VI compliant and animal derived component free (ADCF)
- » Compliant with FDA regulations CFR 21 177.2600
- » Lot numbering enables product traceability
- » EPDM or Viton rubber core option available

Gasket materials selection chart

	Purity	SIP	Continuous steam	Chemical resistance	Sealability	Max continuous temp	Key

High pressure hose

Platinum-cured silicone braided hose

High pressure flexible braided hose with continuously extruded Platinum-cured silicone core ensures product integrity while delivering increased pressure capability.

Manufactured and packed in an ISO 14644-1 Class 7 cleanroom. Product validation studies were performed on the post gamma irradiated product.

- » Extractables using a multi-solvent approach to BPOG guidelines
- » USP Class VI compliant and animal derived component free (ACDF)
- » Suitable for sterilization by autoclave and gamma irradiation up to 50kGY
- » Lot numbering enables product traceability
- » Available in either 7.6m (25ft) and 15.2m (50ft) coils

BioPure fluid path components

BioBarb, Bio-Y, BioEndCap and FlatBioEndCap single-use fluid path components meet the high purity demands of the biotechnology and pharmaceutical industry.

These components are manufactured and packed in an ISO 14644-1 Class 7 cleanroom from a DMF listed polypropylene compliant FDA and USP VI. Product validation studies were performed on the post gamma irradiated BioPure components.

- » Extractables using a multi-solvent approach to BPOG guidelines
- » USP Class VI compliant and animal derived component free (ACDF)
- » Raw material assigned FDA drug master number: DMF 9040 and fulfils requirements of European pharmacopoeia, 5th edition (2004) and supplement 5.8 (07/2007), monograph 3.2.2.
- » Suitable for sterilization by autoclave and gamma irradiation
- » Lot numbers moulded in for full traceability
- » Precision compression between tube and fittings eliminates flow by-pass and media entrapment

BioValve, Q-Clamp, BioBarb, and Bio Y

BioBarb

Hose barb to Tri-Clamp adaptors

BioBarb™ incorporates an oversized barb design which facilitates an extremely strong adhesion to the tubing.

- » The full through bore diameter ensures smooth transition from tube to adaptor, reducing turbulence
- » The identical ID of barb and tubing allows complete drainage along an unimpeded flow path
- » Enhanced Tri-Clamp design reduces the risk of a seal failure

Bio Y

Equal barbed Y connectors

Bio Y™ connectors are designed to meet the same high performance standards of our BioBarb adaptors.

- » Y junction splits the flow with minimum turbulence to optimise flow rate and back pressure
- » Identical ID of barb and tubing allows complete drainage along an unimpeded flow path
- » Size identification moulded into every component for ease of use

BioEndCap

End caps with pull-tab for connectors

BioEndCap™ is designed to terminate a disposable manifold until a new connection is to be made.

- » Uniquely constructed pull-tab ensures easy removal of the cap
- » Pull tab designed for strength but sufficient pliability to avoid damage to any contact materials
- » Provides a reliable, repeatable seal when used in combination with a gasket and clamp

FlatBioEndCap

End caps for connectors

FlatBioEndCap™ is designed to terminate a disposable manifold until a new connection is to be made.

- » Provides a reliable, repeatable seal when used in combination with a gasket and clamp
- » Traditional flat end cap design to directly replace stainless steel equivalent
- » Size identification moulded into every component for ease of use

BioClamp

Plastic Tri-Clamp

BioClamp is specifically designed to meet the needs of busy pharmaceutical and bioprocessing laboratories.

- » Preferred over stainless steel clamps to reduce the distortion on polymeric fittings when subjected to heat
- » Tamper evident feature available on the 1/2" to 4"
- » Manufactured from borosilicate reinforced nylon, the BioClamp is lightweight and easy to manipulate

BioValve

Variable flow control valve

BioValve™ is a precision restriction flow controller and shut off valve that has been tested with clear and braid reinforced silicone tubing.

- » Profiled to minimize flow path turbulence
- » Thread pitch is calibrated to 2mm per turn, permitting controlled flow restriction
- » Can be applied to tubing already in situ
